

Abstract

The user interface on a computer system displays information about an entity, such as a person, a business, a pet, a country, etc. The screen is associated with the entity. A plurality of recordations are associated with the entity. The recordations are of at least two different types and are associated with the period of time. A plurality of selection mechanisms are on the screen. Each of the selection mechanisms are associated with at least one type of recordation. A time selection mechanism is adapted for selecting a period of time. The time selection mechanism is associated with at least a portion of the plurality of recordations and is operative to present one or more recordations which correspond with the selected period of time. The user interface can be accessed over a computer, either as a stand-alone or over a network, whereas on a memorial such as in a headstone.
